

User Manual: Veritas Keep

Welcome to Veritas Keep. This isn't just a simple expense calculator. It is your personal, intelligent agent designed to take the hassle out of managing household finances, tracking warranty deadlines, and organizing your documents.

1. First Steps

1.1. Login and Security

Keep relies on bank-grade security to keep your data safe.

- **Google Account:** Log in with a single click using the secure OAuth protocol. No need to create or remember new passwords.
- **Biometric Guard:** Every time you launch the app, you will be prompted to verify your identity (Fingerprint or FaceID). Your data is heavily encrypted and inaccessible to unauthorized individuals.

1.2. Welcome Screen (Onboarding)

Upon your first launch, the assistant will guide you through a quick tutorial. *Tip:* If you ever want to see it again, simply log out and tap "Replay Intro" on the login screen.

1.3. AI Packages and Actions (Payment Model)

We have completely removed the traditional, rigid PRO subscriptions. In Keep, you only pay for what you actually use:

- **Free Actions:** Every month, you receive **20 free AI actions** to use for document scanning and chatting with your assistant.
- **Additional Packages:** If you need more, you can purchase a **50-action pack** at any time. Best of all, purchased actions do not expire at the end of the month—they roll over and stay with you until you use them up! Meanwhile, your 20 free actions will still refresh at the beginning of every month.

2. Action Center: How to add documents?

To add anything to the app, tap the large, pulsing Plus (+) button at the bottom of the screen. This opens a menu with four options:

A. Scan Document (Camera)

- **Best for:** Paper receipts, printed invoices, official letters.
- Point your camera at the document. The AI will automatically detect the edges and remove the background (don't worry if the angle is crooked). Take the picture. The system will read the data (OCR) instantly, using parallel image and text processing.

B. Choose File (Upload)

- **Best for:** PDF invoices from emails, e-tickets, DOCX contracts.
- Select a file from your phone's storage. The system supports common image files (JPG, PNG) as well as professional document formats (PDF/DOCX).
- **Multi-page Analysis:** The AI can read extensive PDF documents (e.g., construction quotes or multi-page contracts), extracting the most important items (up to 20 main elements) and the final amount to be paid.

C. Voice Input

- **Best for:** Quick expenses on the go without a receipt.
- Tap the microphone and speak naturally, e.g., "I got gas at Shell for 150 bucks and bought some wiper fluid."
- The AI will understand the context, break down the amount, and precisely assign the main categories and specific subcategories for your items.

D. Manual Entry (Note)

- **Best for:** Quiet notes in public places. Type a quick text like "Grocery store 45 bucks".
- **Deadline Recognition:** Type "I bought shoes, I have 30 days to return them", and the AI will automatically calculate the date and set a reminder for the return deadline.

E. Visual Audit (Smart Inspection)

- **Best for:** Inventory management (fridge, pantry, construction materials), documenting technical conditions (rented cars, damaged packages), and equipment verification.
- **How it works:** Point your camera at an object, space, or package and take a photo. The AI will perform an instant inspection: it will recognize identified objects, assess their general condition, detect any potential damage, and generate a detailed audit report.
- **Vault Integration:** Audit photos (e.g., of valuable home possessions) can be saved directly to your Offline Vault . This ensures that sensitive reports and large image files remain exclusively on your device's memory, without taking up cloud storage.

- **AI Assistant Support:** You can ask your AI Assistant in the chat about your audit results at any time (e.g., "What's missing in the fridge?" or "Show me the bumper inspection report"). The Assistant can also proactively suggest performing an audit using smart Action Chips.

3. Home Screen Widgets (Quick Access)

To keep your finances always at hand, you can add smart Kept widgets directly to your smartphone's home screen. We offer 3 sizes tailored to your needs:

- **Small (2x2):** Perfect for quick data entry. It includes shortcuts to the scanning and manual entry tools, as well as a quick launch button for the AI chat.
- **Medium (2x4):** Great for a quick cost overview. It displays live information about your monthly financial balance and features integrated buttons for quick scanning (camera) and voice input.
- **Large (4x4):** Your ultimate command center. It shows your current balance, a preview of recently added documents, and allows instant access to your virtual Assistant.

4. Verification and Smart Warnings

After adding a document, you will see the Verification screen. This is where the AI shows you what it understood.

- **Preview:** You can see the scanned document or the content of your note.
- **Data Fields:** The AI automatically fills in the Store, Date, Amount, and Category. You can edit them by tapping on any field.
- **Advanced Finances:**
 - **Tips & Services:** If a tip was manually written on the receipt, the AI will separate it as a distinct service.
 - **Net/Gross Taxes:** (Useful e.g., in the US) The AI can proportionally distribute the tax added at the end across the individual products on the list.
- **AI Warnings:** If you have configured your "Habits", a red alert may appear at the top of the screen. Example: If you have a gluten allergy and the AI finds "wheat buns" on the receipt, it will display: "THREAT DETECTED: Product contains gluten."
- **Save:** Tap "Save to Database" to confirm the entry. The warning will be permanently attached to the document.
- **Private Vault - Offline**  : For documents of the highest confidentiality (e.g., private contracts, sensitive medical test results), we have introduced a zone completely disconnected from the internet. When saving a document, you can check the "Save to Vault" option. The system will skip cloud synchronization. Your document and its image will be encrypted and saved *only* in the local memory of your device. Documents in the Vault are marked with a special padlock icon () to distinguish them from those safely stored in the Cloud ().

5. Main Screen (Dashboard) and Expense Management

The Dashboard is your financial command center. You will find the most important information gathered in one place.

- **"Wallet First" Doctrine:** All financial documents (containing an amount to be paid) go first to the main "Wallet" list. Non-financial documents (e.g., prescriptions, contracts without amounts) bypass the wallet and go directly to the appropriate folders in "Categories".
- **Expense Monitor (Burn Rate):** Set your monthly budget in the options. The progress bar will show you how much funds are left until the end of the month. If you exceed your budget, the bar will turn a warning red.
- **Travel Mode (Multi-currency):** Are you abroad? No worries. If you scan a receipt in a different currency (e.g., in Euros), the AI will automatically detect it. Kept will use the current exchange rates from the day of purchase and convert the amount to your home currency, adding it to your monthly statistics.

6. Subscription Guardian (Recurring Expenses Management) ✨ NEW

Kept automatically keeps track of your fixed, monthly fees (e.g., Netflix, gym, software).

How does it work?

When you add a document (scan a bill or simply say/type: "I have a Spotify subscription for 20 bucks a month"), the AI automatically recognizes it as a recurring expense and adds it to the Guardian.

- **Compact Home Screen Widget:** On the main screen, you will find a special "Your Subscriptions" tile. It displays the total monthly cost of all your services and the number of active subscriptions.
- **Subscription Manager:** Tap the widget to open a detailed list. There you can see all your active subscriptions.
- **Cancellation:** Cancelled a service? Tap the "Trash" (Cancel) icon next to it on the list. The app will immediately stop including it in your monthly costs.

✨ Optimize with AI Assistant (Your Financial Advisor)

At the bottom of the Subscription Manager, you will find an optimization button. Upon tapping it:

1. You will be seamlessly redirected to the chat with the Assistant.
2. The AI will analyze all your active services, utilizing its vast general knowledge of the market and the internet.

3. You will receive an instant report: The Assistant will point out overlapping services (e.g., two similar VOD platforms), suggest specific, cheaper competitor alternatives, and calculate exactly where you can save money!

7. Your Personal AI Assistant (Chat)

In the bottom right corner of the screen, you will find a floating chat icon. This is your direct contact with the app's intelligent brain.

- **Ask about anything:** "When does the warranty on my TV expire?", "How much did I spend on gas last month?". The Assistant will answer based on your documents and include references (e.g., [1]), which, when tapped, will show you the original receipt scan.
- **Drawing Charts:** Ask the assistant: "Draw me a chart of my food expenses from the last 3 months", and it will generate a beautiful, readable chart directly in the chat window!
- **Auto-TTS (Voice Playback):** If you enter a query by voice (dictation), the Assistant will reply to you out loud. If you type it manually, it will reply silently with text.

Personalization (Avatar -> My Assistant)

Tap your avatar in the top left corner and go to the "My Assistant" -> "Persona and Habits" tab.

- **Persona:** Change the assistant's character. It can be a cold, precise accountant, a chill buddy (who uses emojis and casual tone), or a strict financial coach.
- **Habits (Automations):** Create your own rules for the AI. Example: "Categorize all purchases at Walmart as 'Groceries' and add the #Food tag".

8. Desktop Version (PC)

Kept is not just a mobile app. If you prefer working on a large screen:

1. Click your avatar in the app and select "Desktop Version".
2. Send the generated link to your email or type it into your PC browser.
3. You will get a convenient, tabular view of your expenses with the ability to easily browse, export data, and generate PDF reports.

FAQ – Frequently Asked Questions

1. Is the app free to use? Yes! Every month you receive **20 AI actions** completely free of charge to use for scanning receipts, processing documents, and chatting with the assistant. If you need more, you can buy a 50-action pack at any time. Importantly—purchased actions never expire at the end of the month; they roll over until they are fully used!

2. Are my sensitive documents (e.g., medical records, contracts) safe? Security is our top priority. The app is secured by Google login and your biometrics (Fingerprint / FaceID). Additionally, we offer a **Private Vault (Offline Vault)** feature. If you mark a document as confidential, it will be encrypted and saved *only* in your phone's local memory—it will never be uploaded to the cloud!

3. I have subscriptions I no longer use. How do I remove them from calculations? Our new **Subscription Guardian** makes managing recurring payments easy. Simply tap the "Your Subscriptions" widget on the Home Screen to open the Manager, and tap the "Trash" (Cancel) icon next to the service. The system will immediately stop including it in your monthly costs.

4. Can the AI help me save money on my subscriptions? Absolutely! Inside the Subscription Manager, you will find an ✨ **Optimize with AI Assistant** button. Once tapped, your Assistant will analyze your packages, utilize its knowledge of the internet and market, point out overlapping services, and suggest names of cheaper competitor alternatives.

5. What is the fastest way to add expenses? You don't even have to open the app! Add one of our **three widgets** (small 2x2, medium 2x4, or large 4x4) to your smartphone's home screen. With a single tap from your desktop, you can launch the camera to scan a receipt or the microphone for voice input.

6. I was on vacation and have receipts in a foreign currency. What now? It's simple! Scan the receipt as usual. Our smart **Travel Mode** will automatically recognize the foreign currency (e.g., Euros or Dollars) and convert it to your default currency based on the exchange rate from the day of purchase.

7. Can I view my expenses on a computer? Yes. Tap your avatar in the mobile app and select **"Desktop Version"**. You will receive a special link that you can open in a PC browser, giving you convenient access to tabular summaries and data exports.

8. What is the Visual Audit feature used for? Visual Audit is your tool for smart documentation and inventory management. Instead of manually writing down missing items in your fridge or describing scratches on a rental car, simply take a photo. The AI automatically identifies objects, assesses their condition, and generates a report. It's the perfect solution for protecting yourself during returns, equipment rentals, or planning your shopping.
